                                                                                                                                                                         This invention relates to novel method for antibody production comprising a Chinese hamster ovarian tissue-originated (GHO) cell transferred with a gene encoding an antibody molecule for producing a composition comprising an antibody molecule with an Fc domain bonded to the N-glycoside linkage complex sugar chain. The produced antibody compositions are drugs for prevention or treatment of diseases accompanying tumour, allergy or inflammation, autoimmune diseases, circulatory diseases, and viral and bacterial infections. The

antibodies can be stably produced using the method of the invention with high binding activity and potency thus leading to high safety an reduced side effects when applied alone or in combination with other darugs for therapy. The present sequence represents a nucleotide molecule used in the method of the invention.
                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an anti-human alpha 1-6 fucose fucosyltransferase (alpha 1-6 fucT, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fucT by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fucT antibody can be used for immunoassay. The present sequence encodes the human alpha 1-6 fucT protein of residues 237 to 575, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                              Human; alpha 1-6 fucosyltransferase; alpha 1-6 fucT; antibody;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                 The present invention describes an anti-human alpha 1-6 fucose fucosyltransferase (alpha 1-6 fuct, also called alpha 1-6 fucose transferase) antibody. Also described are: (1) a hybridoma producing the above monoclonal antibody; (2) an immunoassay for detecting human alpha 1-6 fucT by using the above antibody or its antibody fragment; and (3) a reagent used for the above immunoassay. The anti-human alpha 1-6 fucT antibody can be used for immunoassay. The present sequence encodes the human alpha 1-6 fucT protein of residues 343 to 575, which is used in an example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

Direct Submission

Submitted (16-JUL-2001) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN) Laboratory for Genome Submission

Submission Besearch Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suchiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (8-mail:genome-res@ger.riken.go.jp, Fax:81-45-503-922, Fax:81-45-503-9216)

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
